

# Evolution Pro Treatment

ANTI-FRIZZ / CONTROLLED CURLS AND WAVES

## PRODUCTS REQUIRED:

- EVOLUTION PRO SHAMPOO
- EVOLUTION PRO FRIZZ TAMER
- EVOLUTION PRO CONDITIONER
- J PREMIUM FLAT IRON

# STEP BY STEP - Anti-frizz / Controlled Curls and Waves Evolution Pro Treatment

## 1 SHAMPOO

Apply EVOLUTION PRO SHAMPOO once or twice to damp hair and massage it gently and evenly. Rinse thoroughly and towel-dry hair to remove excess water.

## 2 APPLICATION

Briefly towel-dry hair. Divide hair into 4 large sections. Start from the back of the neck, separating out small locks of hair and applying the product massaging with a stiff brush, starting 0.5 cm from the skin and running it through to the ends. Massage each lock of hair in your hands to allow the product to be correctly absorbed. Carefully comb each lock, accompanying the curls and following their natural movement. Leave on for 15 minutes.

## 3 POST-TREATMENT DRYING

Dry hair fully, using hands. Before using the flat iron, check that hair is properly dry.

## 4 HIGH TEMPERATURE FLAT IRON

Adjust the temperature of the J PREMIUM - JEAN PAUL MYNÉ hair flat iron between 180°-220°C. Separate the hair into 4 large locks and then divide into very small sections, starting from the back of the neck. Run the flat iron 5/6 times. Hold the lock of hair taut with the comb, run the flat iron from the root to the end, each time checking the result.

## 5 RINSING AND CONDITIONING

Rinse thoroughly and apply EVOLUTION PRO CONDITIONER. Leave on for 5/6 minutes, without covering the head. Rinse thoroughly, towel-dry hair and add a few drops of VETIVER OIL to increase shine and then style as desired.

[GO TO THE DETAILED STEP BY STEP INSTRUCTIONS](#)

# ANTI-FRIZZ/ CONTROLLED CURLS AND WAVES TREATMENT - EVOLUTION PRO

- Benefits: restores shine, reduces volume and leaves hair easy to comb, even after subsequent washes at home following treatment. It is ideal to redefine or loosen the curl.

## ■ STEP 1 SHAMPOO

Apply sufficient quantity of EVOLUTION PRO SHAMPOO to damp hair and massage in gently, ensuring that the product forms plenty of foam. Shampoo once or twice and leave on the last shampoo for a few minutes. Towel-dry carefully to eliminate excess water.

## EVOLUTION PRO SHAMPOO

The alkaline pH of this shampoo and its special formula based on natural origin surfactants derived from olive oil and coconut oil allow it to act on the hair fibres, "opening" the cuticles. This makes it the perfect first step in preparing hair for treatment.

Free from SLS, SLES, allergens and parabens, it contains extracts of olive oil, coconut oil, Aloe Vera and Green Coffee.

### ■ STEP 2 APPLICATION

- Wear protective gloves and treat in a well-ventilated room.
- Use a comb to divide hair into 4 large sections.
- Pour approximately 10 to 20 grams of EVOLUTION PRO FRIZZ TAMER according to hair length. Start from the back of the neck, separating the hair into locks as it falls naturally and apply EVOLUTION PRO FRIZZ TAMER using a stiff brush, starting 0.5 cm from the skin and running it through to the ends.
- Massage each lock of hair in your hands to facilitate the product's penetration into the hair fibres. If ends are damaged or split, massage thoroughly to facilitate absorption.
- Carefully comb each lock, accompanying the curls and following their natural movement, returning them to their natural position.
- Without covering the head, leave on for 15 minutes under a heat source.

## EVOLUTION PRO FRIZZ TAMER

Contains no formaldehyde and glutaraldehyde. This is a professional product, specific to control frizz, reduce volume and define curls. Hair is restored and becomes healthier.

Contains Allantoin, natural derivatives of sulphur and oat proteins restoring hair perfectly.

## ■ STEP 3 POST-TREATMENT DRYING

- Dry hair fully, using hands.
- Before using the flat iron, check that hair is properly dry.

## ■ STEP 4 HIGH TEMPERATURE FLAT IRON

- Before using the flat iron, carefully check that hair is properly dry.
- Adjust the temperature of the J PREMIUM - JEAN PAUL MYNÈ hair flat iron, according to the instructions given in the TEMPERATURE TABLE. In this case, the aim is to reduce frizz and loosen the curl, so the flat ironing should be less intense and at most run through 5/6 times.
- Separate the hair into 4 large locks and then divide into very small sections, starting from the back of the neck, using a fine-toothed heat-resistant tail comb.
- Hold the lock of hair taut with the comb, run the flat iron from the root to the end at a temperature of between 180°C and 220°C up to 5 times, depending on hair type.

### TEMPERATURE TABLE

After having ironed the first few locks (back of the neck), note the colour of the hair; if the colour changes by more than 1 shade, reduce the temperature by 10°/20° until colour stability or at most a change by 1 shade is guaranteed.

Hair type	Temperature
Natural curly and/or frizzy	230°C or lower
Coloured/treated with other chemical products or highlights	From 180° to 220°C
Bleached/two-tone coloured/fine	From 180° to 210°C
White hair or hair with a high percentage of white hair	Do not exceed 180°C

## ■ STEP 5 RINSING AND FINISHING

- Rinse thoroughly and apply EVOLUTION PRO CONDITIONER.
- Leave on for 5/6 minutes without covering the head.
- Rinse carefully with warm water.
- If necessary, apply a few drops of VETIVER OIL to increase shine.
- Dry naturally using the diffuser to keep a natural effect.
- Repeat treatment every 3 or 4 weeks.

### EVOLUTION PRO CONDITIONER

Suitable for all hair types, this is an integral part of the frizz-removing and volume reduction procedure. It leaves hair soft, shiny and easy to comb.

Contains extracts of Black Pepper and Argan Oil ensuring excellent moisturising and strengthening action.
