

Miracle, Come True!

ISTRUZIONI D'USO
INSTRUCTIONS FOR USE

Had you ever dreamt you would be able to BLEACH, COLOUR AND PERFORM ALL CHEMICAL TREATMENTS in the salon and rebuild the hair at the same time?

WHAT IS “OXILOCK plasma”?

OXILOCK plasma is the exclusive complex of substances of organic origin: OXILOCK plasma No. 1 restores the keratin before, during and after aggressive chemical treatments and can be used as the ideal tool for obtaining fantastic results in any situation. The hair regains health amazingly in terms of resistance to breakage and reduction of brittleness (especially on “porous” hair, damaged or weakened by the standard chemical treatments). **OXILOCK plasma No. 1** restores the hair’s natural well-being without interfering with the result of the chemical treatment being performed. Thanks to this new technology, the limitations of the traditional hair treatment techniques (perm, colour, bleach, etc.) can finally be overcome, opening the way to an incredible new professional horizon. There is something “miraculous” about the result, with perfect hair even after aggressive chemical treatments and clients who are enthusiastic right from the first application. Free from “ghost” chemicals, silicone, sulphates, aldehydes or other aggressive substances.

OXILOCK plasma will become an essential tool in the salon to allow stylists to work in complete safety and achieve performances never seen before. **The first real revolution in the sector since the birth of permanent colour.** The essential ally for the well-being of your clients’ hair and for your work as a stylist, finally freeing you from the constraints and the fear of damaging hair with extreme styling procedures. Thanks to the innovative OXILOCK plasma technology, these limits can finally be left behind, pushing hair beyond ordinary expectations. The revolutionary performance of protection and recovery of even the most seriously damaged hair during technical treatments themselves.

SIMPLE, SAFE AND REVOLUTIONARY

- It does not change the way you work
- It does not add any steps to the standard colour and bleaching process

ABSOLUTE BENEFITS

- It multiplies the keratin bonds, improving and reinforcing the sulphur bridges damaged during previous treatments
- It improves the hair’s quality and structure visibly and instantaneously
- Instantaneous effect
- It guarantees safety for every type of technical procedure
- It simultaneously protects against and prevents damage by aggressive chemical treatments
- Absolute stylistic and colouring freedom

2 SIMPLE STEPS: OXILOCK plasma **MIRACLE No.1** - OXILOCK plasma **COME TRUE No.2**

WITH COLOURING AND BLEACHING

The application method for OXILOCK plasma is very simple. For maximum effectiveness, it is important to use the recommended doses with the aid of the dispenser provided, and follow the sequence of steps.

Mix the bleach and oxygen or colour and activator, add the necessary amount of OXILOCK plasma no. 1 with the aid of the dispenser and mix. More powder bleach can be added to reach the desired consistency. If more than 30 g of powder bleach is required, mix in a new bowl, complying with the recommended quantities, and never exceed the amount of 7 ml of OXILOCK plasma no.1. ALWAYS COMPLY WITH THE RECOMMENDED DOSE, USING DIGITAL SCALES FOR ACCURACY.

QUANTITIES AND INSTRUCTIONS

TREATMENT TYPE	OXILOCK plasma Miracle no. 1		OXILOCK plasma Come true no. 2
APPLICATION	DOSES	EXAMPLE	INSTRUCTIONS
Superlightening and colour (Semi-permanent and Permanent)	Never exceed 3.5 ml of No.1 (one dose)	40 g colour + oxygen (the quantity required by the colour system used)+ 3.5 ml of No.1	14 ml of no. 2 on medium-long hair. Apply to lengths and ends, only at the end of the entire technical service as the final step, without shampooing first, leaving to act for at least 10 minutes depending on requirements. Rinse and use Navitas Sensitive Shampoo and Navitas Sensitive Conditioner or Navitas Sensitive Mask.
Powder bleach**	3.5 ml of no. 1 (one dose) for 15g of powder bleach (without considering the oxygen) Never exceed the amount of 7 ml of OXILOCK plasma no.1 even if more than 30 g. of bleach is used.	30 g bleach + oxygen (when required by the colour system used, increasing by one level compared to normal practice (if 10 volumes, increase to 20 volumes) except on fine hair) + 7 ml of No. 1 (two doses).	

**OXILOCK plasma No.1 might cause a slight increase in the leave-in time required. To avoid this, increase the amount of oxygen by one level.

- Use 20v when you wish to obtain the result of 10 volumes.
- 30v for 20
- 40v for 30

DO NOT increase the oxygen volume with very fine hair because it is very fragile.

CREAM BLEACH

When using a CREAM BLEACH, apply the proportion of 7 ml of OXILOCK plasma No. 1 to every 45 g of bleaching cream used. If more than 45 g of cream bleach is used, a second bowl should be utilised to maintain the same consistency, and use 3.5 ml of OXILOCK plasma No.1 for quantities of less than 45 g of cream bleach.

BALAYAGE, TONER, GLOSS, & COLOUR (permanent, semi-permanent and demi-permanent):

Never exceed 3.5 ml of OXILOCK plasma No. 1 in colour or gloss. There is no need to increase the oxygen volume. Only add OXILOCK plasma No. 1 to GLOSSES or DIRECT COLOURS with activator with a leave-in time of 10 minutes or over.

GENERAL PRECAUTIONS:

- PRECAUTIONS DURING BLEACHING

The usual precautions necessary during bleaching procedures must be complied with:

- KEEP A VISUAL CHECK ON THE LEAVE-IN TIME AND THE BLEACHING PROGRESS
- ANY HEATING REACTION DURING BLEACHING IS DUE TO THE BLEACH AND NOT TO THE OXILOCK plasma; IN THIS CASE, RINSE THE HAIR AT ONCE.

- HEAT

Heat does not create problems with OXYLOCK plasma but a check should be made every 3/5 minutes in the usual way. If the hair is seriously damaged, do not use heat, as this will enable OXILOCK plasma No. 1 to provide the maximum recovery.

- REDUCTION IN LIGHTENING POWER

If you notice a reduction in lightening power when using OXILOCK plasma, simply reduce the quantity used in the mix. This will solve any problems.

OXILOCK plasma No. 2

At the end of the service, rinse carefully and DO NOT SHAMPOO. Apply OXILOCK plasma No. 2, which works in synergy with No. 1 and has been developed to complete and conclude the OXILOCK plasma treatment. No. 2 is necessary with all services, to maximise performance and guarantee an excellent result. It is a concentrate of organic substances which restore the health of the hair's keratin fibres. It restores a healthy, strong look to hair damaged by aggressive chemical treatments thanks to its amazing restructuring action. The quantity of No. 2 required varies depending on the length and amount of hair, but as a guideline we recommend use of about 15 ml for each application.

** do not apply colour or bleach after OXILOCK plasma STEP 2; only a GLOSS or TONER without activator may be applied.

INSTRUCTIONS FOR USE:

- Rinse after bleaching or colour. **DO NOT SHAMPOO**
- If applying a gloss or toner (without activator) after bleaching, colour or lightening, apply and leave to act (the hair should be shampooed after this)
- Rinse and towel dry
- Apply 14 ml OXILOCK plasma No. 2 from roots to tips. Comb.
- Leave to act for at least 10 minutes. Longer if the hair is damaged.
- Rinse out of the hair and continue with NAVITAS SENSITIVE shampoo and conditioner or mask.

WITH PERM

OXILOCK plasma can also be used to protect the health of the hair during perms with a standard formula or with a personalised application as recommended in the table below.

QUANTITIES AND INSTRUCTIONS

HAIR TYPE	OXILOCK plasma no. 1	INSTRUCTIONS
Badly Damaged	Use No. 1 PURE	Apply the neutraliser to every roller and leave for 5 minutes. Rinse and towel dry. OXILOCK plasma No.1 to every roller. Set the timer for 5 minutes and after this time apply No. 1 to every roller again, leaving to act for another 5 minutes. After this, take out the rollers and rinse thoroughly, then proceed with No. 2**.
Coloured and Bleached	Mix 30 ml of OXILOCK plasma No.1 with 90 ml of water* (distilled if possible, but this is not essential)	Apply the Neutraliser to every roller and then apply the OXILOCK plasma No.1 mix at once, directly over the neutraliser just applied. Leave to act for 5 minutes and reapply OXILOCK plasma No.1, leaving it to act for another 5 minutes. Take out the rollers and rinse thoroughly, then proceed with No. 2**.
Coloured	Mix 30 ml of OXILOCK plasma No.1 with 90 ml of water* (distilled if possible, but this is not essential)	Apply the Neutraliser to every roller and then apply the OXILOCK plasma No.1 mix at once, directly over the neutraliser just applied. Leave to act for 10 minutes. Take out the rollers and rinse thoroughly and proceed with No. 2**.
Natural	Mix 30 ml of OXILOCK plasma No.1 with 90 ml of water* (distilled if possible, but this is not essential)	Apply the Neutraliser to every roller and then apply the OXILOCK plasma No.1 mix at once, directly over the neutraliser just applied. Leave to act for 10 minutes. Take out the rollers and rinse thoroughly, then proceed with No.2** .

*use a proportion of 1:3 if less mix is required.

** leave No.2 to act for 10 minutes and conclude with NAVITAS SENSITIVE shampoo and conditioner or mask.

STANDARD FORMULA

Mix 14 ml of OXILOCK plasma No.1 with 90 ml of water in a non-spray applicator bottle. Wet the rollers with the mix and leave to act for 7.5 minutes. If you have time, wet the rollers again, without rinsing. Leave for a further 7.5 minutes, giving a total of 15 minutes. Take out the rollers, rinse and proceed with OXILOCK PLASMA No.2, leave to act for 10 minutes and conclude with NAVITAS SENSITIVE shampoo and conditioner or mask. There is no need to wait for 48 hours to wash your hair after perming with Oxilock plasma.

WITH CHEMICAL SMOOTHING

Rinse all traces of the neutraliser or neutraliser shampoo from the hair and dry.

STANDARD FORMULA

Mix 14 ml of OXILOCK plasma No.1 with 90 ml of water in an applicator bottle. Apply to all the hair and leave to act for 7.5 minutes. Rinse and proceed with OXILOCK PLASMA No.2, leave to act for 10 minutes and conclude with NAVITAS SENSITIVE shampoo and conditioner or mask.

WITH KERATIN SMOOTHING TREATMENTS

OXILOCK plasma Miracle Come True gives excellent results in association with keratin treatments. Use before the treatment for silky, soft, gleaming, stronger hair. The hair will also be much more flexible with greatly improved resistance to breaking. It is important to apply OXILOCK plasma before the treatment in order to enable it to penetrate into the hair more effectively during application of the smoothing product.

Mix 15% No.1 and 85% water in a bottle with applicator. Apply to the hair at the washbasin, ensuring that it is thoroughly saturated. Leave to act for 5 minutes and proceed, without rinsing, to apply OXILOCK plasma No.2, combing to distribute it evenly. Leave to act for 10 to 20 minutes. Proceed with application of the keratin treatment with the special shampoo, treating in the normal way. OXILOCK plasma will perform splendidly in improving the result and providing an even more striking smoothing effect, leaving the hair stronger and healthier.

AR

WHO CAN USE IT?

Anyone. It is a treatment that removes residues from your hair, and is especially suitable for individuals who normally use chemical treatments, such as permanent bleaching, toners, or chemical straightening. It is also recommended for anyone who washes their hair with hard water, goes to a swimming pool regularly or whose hair is subject to stress.

WHEN SHOULD YOU USE IT?

It restores the natural wellbeing of your hair and represents the perfect starting point for all technical treatment, without the risk of interfering with the results. It can be used as often as you wish, especially before any chemical treatment. It is safe and gentle, completely natural, with no paraben, allergens, SLS, SLES

or other harmful substances. It produces extraordinary results and immediately balances the structure of your hair, revitalising it and freeing it from build-ups of heavy metals and the residues of all chemical treatments, that make it lifeless and damaged.

HOW TO USE IT

- Pour a sachet of OXILOCK PLASMA RESET into a bowl (or into a container with an applicator). Add 55g of hot water and mix well until an even gel starts to form. This will only take around 4-5 minutes.
- Wash your hair with Enhancing Shampoo*, rinse and pat dry with a towel.
- Apply the gel by massaging your hair from roots to tips to ensure that it is fully absorbed all over.
- Cover with a cap or hairnet and leave it under a heat source.

- » 10-15 minutes for light build-ups
- » 15-30 minutes for medium build-ups
- » 30-45 minutes for heavy build-ups
- At the end of the exposure time, shampoo again with Enhancing Shampoo* and rinse thoroughly.
- Proceed with chemical treatment as usual by using OXILOCK PLASMA MIRACLE COME TRUE, following the user instructions.

*For very sensitive skin, use Navitas Sensitive Shampoo.

N.B.: OXILOCK PLASMA RESET crystal gel is recommended before each professional service. The removal of residues from your hair following previous treatments will allow you to speed up your next service. OXILOCK PLASMA RESET is not recommended for naturally white or grey hair. It can be used on these hair types only if you carry out a perm or colour service immediately afterwards. IT MUST NOT BE USED if you wish to retain the effect of previous chemical treatments.

ADVANTAGES FOR:

COLOURING & BLEACHING

It is an effective safety method for eliminating layers of artificial pigments that have built up in the hair and that cause residues of heavy metals and that can affect a subsequent colour change. The colouring process will be quicker and long longer over time. It avoids the risk of a metallic effect, which alters the result of the colouring. It provides a more vibrant colour.

PERM

It ensures a successful perm with all types of curls.

It standardises and prepares the hair, making it stronger to ensure a greater performance removing all those minerals, oxidants or other substances that could hinder a successful perm.

It makes the hair stronger and more resistant.

STRAIGHTENING

It prepares the hair to guarantee results with the least damage.

It standardises and prepares the hair, making it more resistant to ensuring a greater performance, removing all those minerals, oxidants or other substances that could hinder a successful straightening.

SENSITIVE SCALP

It can be used as an exfoliator on the scalp, to gently remove residues of minerals and build-ups of heavy metals that can cause skin irregularities.

Used in tandem with the Navitas Sensitive treatment, it enhances the soothing and normalizing effect of treatment.

FREQUENT CONTACT WITH CHLORINE OR HARD WATER

It immediately brings swimmers' hair to a far healthier condition with a more luminous appearance. It

safely removes chlorine residues and residues of other oxidants, that can damage hair and render it lifeless over time.

It helps to remove residues of metals or limestone that have built up due to frequent swimming or due to very calcareous water, that can cause an unpleasant greenish effect or can make hair appear dull. It quickly restores the shine, volume, manageability and strength of your hair.

N.B. In the case of hair with layers of artificial pigment or colours, these could be partially or wholly removed with the OXILOCK PLASMA RESET treatment.
